

Table of Contents

Systems Biology in Biotech & Pharma: A Changing Paradigm

Executive Summary

Chapter 1 – Discovery: New Developments, Tools & Lead Optimization

Summary

Introduction

Scope & Content of the Report

Drug Discovery & Development

Defining SB: Key Components

Brief History of Systems Biology (SB) in Terms of Key Advances

Potential Impact of Systems Biology on Pharma R&D and Cost Savings

Overall Conclusions

Chapter 2 – Discovery: Towards Virtual Chemistry Screening

Summary

Introduction

Identifying Targets & Druggability Space

Combinatorial Chemistry Tools

Diversity Tools

Diversity-Oriented Synthesis & Discovery

Differentially Expressed Proteins

Phage Display

Chirality Tools

Homology Tools at Discovery

Homology Modeling

Cheminformatics

Fragment Based DD

Qualitative and Quantitative Screens & Filters

Structure-Activity Methods (SAR/QSAR)

Summary on Chemistry Tools at Drug Discovery: Key Findings & Opportunities

Overall Conclusions

Chapter 3 – Biochemistry: Phase 1 Lead Discovery & Molecular Interactions

Summary

Introduction

Molecular Screens: Receptor-Ligand (R-L) Interaction & Molecular Modeling

Molecular Modeling

Quantum Chemistry

Molecular Mechanics

Molecular Dynamics

Receptor Based QSAR Methods

Biomimetics (BioMim)

Collateral Efficacy & Permissive Antagonism

Co-Drugging: Multiple Targets, Combination Therapy & Multi-Stage Targeting

Multi-Component Drugs

Multi-Target Approach

Multi-Stage Targeting

Text Mining For Interactions

Employment of Biochemical Networks

Overview of Deterministic Models

Emergence

Reactome

Bioinformatics

Summary on Biochemical Tools: Key Findings & Opportunities

Conclusions

Chapter 4 – Molecular Biology: Phase 2 Lead Discovery & In Silico Screening

Summary

Introduction

OMICs

- Metabolomics
- Metabolic Profiling
- Peptidome
- Proteome Analysis

Chemogenomics

Morphogenics

Minimal Phenotype & Synthetic Biology

Reconstructing Biological Networks

Summary on Molecular Biology Tools: Key Findings & Opportunities

Overall Conclusions

Chapter 5 – Discovery: Computational Systems Biology in Cell Biology

Summary

Introduction

Cellular Environment: Network Reconstruction & Inference From Experimental Data

Reconstructing Gene Networks

Data Mining

Analysis of Disease Correlation Network™ & Concerted Metabolic Activation

Challenges For Stem Cells: Control

Emergent Properties

Computational Systems Biology

Summary on Quantitative CSB Tools: Key Findings & Opportunities

Overall Conclusions

Chapter 6 – Development: Pharmacology & Pharmacokinetics

Summary

Introduction

In Vivo Pharmacology

Animal Disease Models

Gene Knockout Animal Models

Pheno- & Genotyping

RNA Interference

Pharmacogenomics

In Silico Pharmacology: Future

Summary on *In Vivo* Pharmacology: Key Findings & Opportunities

Conclusions

Chapter 7 – Development: Pharmacokinetics

Summary

Introduction

Towards In Silico Systems, PK & Toxicology

Microdosing in PK

Adaptive Trial Design

Equilibrium vs. Non-Equilibrium PK Models

Toxicity Biomarkers

In Silico Toxicity Prediction

Quantitative PK-PD/Tox Modeling

Summary on PK Quantitative Simulation Tools: Key Findings & Opportunities

Conclusions

Chapter 8 – Development: Multiscale CSB

Summary

Introduction

Redefining (& Discovering) Emergent Properties at Higher-Level Hierarchies

Virtual Organs, Disease Models, Virtual Patient

Population Level Model: Towards Individualized Medicine

Targeting Networks: Towards Organismic & Full-Scale Quantitative Design

Redefining the Traditional R&D Paradigm

Summary of Multiscale CSB: Key Findings & Opportunities

Conclusions

Chapter 9: Development: Drug Formulation & Manufacturing

Summary

Introduction

Drug Formulation & Delivery

Targeting Concept & Mechanisms

Nanoscale Drug Delivery Systems

CSB at Formulation & Delivery

Summary of Drug Formulation: Key Finding & Opportunities

Conclusions

Process Design & Production

Summary

Introduction

Metabolic Engineering

Parallel Cultivation Methods for Bioprocessing

Bioprocess & Equipment Scale-Up

Qualitative Systems Tools

Rule of Thumb

Towards Quantitative Production Design

Summary on Design & Production: Key Findings & Opportunities

Conclusions

Chapter 10: Development: Preclinical Model Based Drug Development

Summary

Introduction

Summary of the Clinical Model: Key Findings & Opportunities

Conclusion

Chapter 11: Systems Biology: Impact on Pharma

Summary

Introduction

R&D Strategies & Investment

Blockbuster vs. Niche Model

Pharma vs. Biotech Model

Outsourcing & In-Licensing

Life Cycle Management Growth

Diversification Growth

Franchise Development Growth

New Market Entry Growth

Alliances & Collaborations: Key Players

Regulation & Intellectual Property
Global Regulation: Critical Path Initiative (FDA)
Intellectual Property (IP)

Summary on R&D Strategies & Investment, Alliances & Collaborators and
Regulation & Intellectual Property

Chapter 12: Report Conclusions

Summary

Report Conclusions

Report Summary & Suggestions

Key Technologies & Tools Needed for Development of Systems Biology/CSB
Steps in Systems Biology/CSB
Benefits of Systems Biology & CSB

Acknowledgement

Bibliography & Endnote
