

Manufacturing in the Global Pharmaceuticals Industry

Contents

Executive Summary

Chapter 1: Key Issues Facing the Pharmaceutical Industry

Structure of the industry

Global product portfolio

Pressures

Structure

Customers

Market exclusivity

Price and operating margins

The need to change the way the industry works

Shorter development times

Focus on key customer areas

Improve collaboration between functions

Learn from other industries

Historical development of manufacturing

1960s and 1970s

1980s

1990s and 2000s

Conclusion

Chapter 2: Pharmaceutical Manufacturing versus Sales Worldwide, in Europe and in Japan

World market

Western Europe

Austria

Belgium

Czech Republic

Denmark

Finland

France

Germany

Greece

Ireland

Italy

The Netherlands

Norway

Poland

Portugal

Slovenia

Spain

Sweden

Switzerland
The UK
Japan

Chapter 3: Pharmaceutical Manufacturing versus Sales in Central and Eastern Europe

Armenia
Georgia
Kazakhstan
Russia
Turkey
Ukraine

Chapter 4: Pharmaceutical Manufacturing versus Sales in the Americas

North America
Canada
The US
Latin America
Argentina
Brazil
Central America and the Dominican Republic
Chile
Colombia
Mexico
Peru
Puerto Rico
Venezuela

Chapter 5: Pharmaceutical Manufacturing versus Sales in the Rest of the World

Africa
Morocco
Nigeria
South Africa
Zimbabwe
Australasia
Australia
New Zealand
Far East
China
Singapore
India
Middle East
Saudi Arabia
Egypt
Jordan

Chapter 6: Strategic Options for Pharmaceutical Manufacture

In-house manufacture

Global or strategic sites

Regional sites

Local sites

The best approach

Partnerships

Joint ventures

Contracting out

Outsourcing

Licensing out

Selling off the product

Selling off the company

Acquisitions

Strategic options for companies in emerging markets

Internal resourcing

External resourcing

Collaboration with the multinationals

Acquisition by the multinationals

Facility for rent

Conclusion

Chapter 7: The Impact of e-Business on the Pharmaceutical Industry

Product registration

Manufacturing information sources

Purchasing

Documentation control

Sales and marketing

Electronic communities

Conclusion

Chapter 8: Outsourcing Pharmaceutical Manufacturing

Why outsource?

Financial reasons

Timing reasons

Resource reasons

Organisational reasons

Outsourcing providers (the contract takers)

Prerequisites for successful outsourcing

The outsourcing provider

The outsourcing user

The contract

Researching the outsourcing market

Outsourcing market

Research targets

Levels of outsourcing
Why outsource?
Choosing a contract acceptor
Conclusion

Chapter 9: Key Issues Facing Pharmaceutical Manufacturing

Drivers for manufacturing strategy
Current manufacturing base
Product portfolio
Capacity
Registrations
Source of raw materials and packaging materials
Internal factors
Quality of the product
Cost of goods
Timeliness of supply
Quality of incoming materials
Productivity
Yield
Sales forecasts
Relationship with R&D and marketing
Technology
Available personnel
Formulations
Level of decision making
Summary
Economic factors
Cost of manufacture
Cost of transport
Capital expenditure
Running costs
Closing plants
Tax advantages
Economies of scale versus flexibility
Exit costs versus re-entry costs
Political factors
Stability of the country
Influence on prices
Influence on product licences
Trade barriers
Geographical factors
Demography - portfolio versus the marketplace
Importance of the market
Regional groupings
Regulatory factors

Climate
Environmental issues
Disaster management
Biotechnology manufacturing
Lack of capacity
Lack of awareness
Lack of investment
Conclusion

Chapter 10: Quality Management in Pharmaceutical Manufacturing

Quality assurance
Good manufacturing practice
Defined processes
Validated processes
Suitable facilities
Clear instructions/procedures
Trained operators
Full and accurate records
Batch traceability
Quality maintained during distribution
Complaints procedure
Recall procedure
Quality control
Electronic records and electronic signatures
GMP for starting materials
GMP guidelines and enforcement around the world
The US
Western Europe
Pacific Rim
Australia
Japan
Latin America
Central and Eastern Europe and the Former Soviet Union (FSU)
Central Asian Republics and the Caucasus
New EU Member States
Russia
Ukraine
Middle East and Africa
Israel
Jordan
Nigeria
Saudi Arabia
South Africa
Yemen
Zimbabwe
Asia

China
India
Singapore
The role of the World Health Organization
WHO codes and guidelines
GMP and the multinationals
Harmonisation of standards
PIC/S
Mutual recognition between the EU and North America
Mutual recognition between the EU and third countries
ICH
Regional harmonisation initiatives
PANDRH
COMESA
Other harmonisation programmes
Conclusion

Chapter 11: Certification of Factories to GMP Compliance

Determining the appropriate standard
Factory inspection - the Food and Drug
Administration (FDA) approach
Pre-approval inspections
Follow-up inspections
Routine inspections
WHO certification scheme
Training of inspectors
WHO prequalification scheme
ISO 9000
Quality Systems Inspection Technique
Conclusion

Chapter 12: Designing and Building a Manufacturing Facility

Obtaining the correct environmental standards
Classification systems
Product types, dosage forms and related technologies
General comments
Dry products
Tablets
Capsules
Powders
Environmental requirements
Semi-solid products
Ointments
Creams
Environmental requirements
Liquid products

Manufacture and filling
Environmental requirements
Sterile products
Environmental requirements
Methods of sterilisation
High-potency products
Antibiotics
Biopharmaceutical products
Packaging
Types of packaging
Batch identification
Environmental requirements
Other dosage forms and technologies
API manufacturing
Trends in facility design
Introduction
Horizontal flow
Vertical flow
Lights-out operation
Volume versus flexibility
Basic Minimum Standard versus Best Practice
Greenfield site development versus refurbishment
Getting the design right from the start
Conclusion

Chapter 13: Validation in Manufacturing

Definitions
Design qualification
Installation qualification
Operational qualification
Performance qualification
Process validation
Design qualification
Production of the URS
Validation master plan (VMP)
Project design brief
Family tree
Design qualification checklist
Formal DQ review
Installation qualification
Determining validation requirements
Carrying out and completing the IQ
Operational qualification
Determining validation requirements
Carrying out and completing OQ

- Performance qualification
- Performance testing
- Health & safety review
- Training records
- Pilot production
- Process validation
- Retrospective validation
- Cleaning validation
- Analytical validation
- Validation - a cost-benefit analysis
- The cost of validation
- The benefits of validation
- Examples of the benefits of validation
- Prospective validation of process equipment
- Retrospective validation of a steriliser
- Retrospective validation of cleaning validation
- Conclusion

Chapter 14: The New Paradigm

- Twenty-first-century pharmaceutical manufacturing
- New terminology
- Quality risk management (QRM)
- Quality by design (QbD)
- Design space
- Process analytical technology (PAT)
- Parametric release
- Putting it all together
- ICH and the 'New Paradigm'
- ICH Q8 Pharmaceutical Development
- ICH Q9 Quality Risk Management
- ICH Q10 Pharmaceutical Quality System
- Mandatory versus optional activities

Chapter 15: The Future for Pharmaceutical Manufacturing

- Trends
- Demography
- Changing medical needs
- Changing science and technology
- Increasing cost pressures
- Future of the multinationals
- Reduction in excess capacity
- Improvement in national quality standards
- Harmonisation
- Global GMP certificate
- The shape of the manufacturing industry
- Conclusion

Glossary

Bibliography and Sources
